

Edit and explore amazing designs with Creatio for iOS

- Make it, Sell it, Get it, Use it -

DeliX Software Ltd. (<http://www.delixsoftware.com>) today announces the release of Creatio 3 app for iOS. Creatio is a design marketplace platform, where users can create, sell, buy and use any graphic design content.

"Creatio's powerful editor gives users the opportunity to buy and sell any graphic digital content such as editable templates, photos, filters, fonts, stickers, vectors, paintings, etc", said Loran Dyrnishi, CEO of DelixSoftware. "With Creatio digital artists can have their own online store to create and sell their work freely. Users can buy and use high quality content sold by popular designers, rather than just the default template designs that other apps offer."

Creatio is a unique platform for graphic designs, like the AppStore for apps. Users and businesses don't have an easy way to get and use high quality designs, rather than just the default ones offered by other apps. Low quality designs greatly affects the impact they should have on followers or clients, and therefore on the final revenue.

"With Creatio we have created a platform, where everyone can use high quality content made by popular digital artists", said Loran. "By using high quality designs, users can increase the visibility of what they want to express. The digital artists have their own online store within the app to create and sell their designs monetizing on the huge mobile market."

The possibilities with Creatio are unlimited.

Any Design

- Designs made by your favourite artists
- High-quality templates to create stunning social posts and stories
- Help users grow their business by using top posters, flyers, logos, etc
- Accessible high-quality brushes, filters, fonts, stickers, vectors, brushes, color palettes, gradients and any graphic design elements

About Us

DeliX Software is a small iOS development company, based in Tirana, Albania. We are two brothers, Loran & Ledion Dyrnishi, and we have founded this company back in 2011. In these years, we have been developing and publishing several highly polished apps.

We have been working on building software since we were teenagers. After graduating on top of our class, we have developed and published Photo & Video applications like: Photonova, Alayer

and Creativ. During these years we have created and used our powerful in-house technology that includes areas like: social networking, artificial intelligence and image processing.
